## JOBPOWER Cloud Delivers Contractors Greater Flexibility and Cost Savings

Quickly Access Real-Time Business Information and Documents - Anywhere, Anytime with JOBPOWER Cloud

**J**OBPOWER Cloud gives contractors instant access to all their company's project information and documents anytime, anywhere using any device with internet connectivity.

Owners, project managers and office employees can work from the office, a job site or home using any Web-enabled device such as a PC, laptop, Apple Mac, iPad, iPhone or Android device.

### GREATER FLEXIBILITY

"JOBPOWER Cloud is great for people 'on the go', who need real-time access to their key job and company data from anywhere," says Rick DeLand, Vice President of JOBPOWER Software. "With so many people using

smart phones and tablets, moving to a cloud-based solution for job information and project management makes perfect sense."

### INTEGRATED ACCOUNTING AND JOB COST

JOBPOWER Cloud brings contractors the same proven industry-specific software that can also be purchased and installed locally. DeLand explains, "JOBPOWER is a complete accounting, job cost, project management, document management and payroll solution that does the job for contractors in all trades."

JOBPOWER is fully integrated and includes financial tracking and reporting, accurate job cost reports, subcontract and change order tracking, bonding reports,

certified payroll, multiple methods of billing including AIA G702/G703, electronic document management and much more.

### COST SAVINGS

"With JOBPOWER Cloud, contractors realize immediate savings by eliminating the cost of maintaining a server, purchasing software, and paying for IT personnel," DeLand points out.

The Cloud version includes everything for one monthly fee, including hosting, storage, support, users and maintenance. Adding additional users is easy and affordable, says DeLand. Microsoft® Office 2010 is also available in JOBPOWER Cloud, allowing field personnel to edit and create documents from the job site on any mobile device.

### SECURITY

"Company data stored in JOBPOWER Cloud is safe, secure and easily accessible," says DeLand. "The data center has full redundancy on everything—servers, data storage, internet connections and backup generators. Only authorized individuals have access via secure logins."

### THE BOTTOM LINE

"With JOBPOWER Cloud, up-to-date job and financial data is always available for better decisions," says DeLand. "With lower up-front costs and the ability to access your job information from any device, anywhere, anytime, JOBPOWER Cloud is the right tool to help contractors reduce expenses, increase profits and gain control over their business."
